## EDUCATION

---

**University of Engineering and Technology, Lahore**  
*Bachelor of Science in Computer Science*  
Cumulative GPA: 3.35/4.0 (6 Semesters)

*Sep 2022 – Present*  
*Lahore, Pakistan*

## EXPERIENCE

---

**Full-Full-Stack Developer Intern |**  
*Devanics | Remote/On-site*

*Nov 2025 – Present*  
*Remote*

- Developed full-stack web applications using MERN stack (MongoDB, Express.js, React, Node.js) for e-commerce and content management platforms
- Built RESTful APIs with Express.js and Node.js, implementing secure authentication, database operations, and business logic
- Designed responsive frontend interfaces using React with modern component architecture and state management
- Worked in stacks such as Webflow and modern web technologies

**Software Development Engineer**  
*Freelance*

*Jan 2023 – Present*  
*Remote*

- Architected and developed console-based applications including library management systems and school management platforms using C++ and C# with object-oriented design principles
- Designed and implemented data structures including custom lists, stacks, and queues for game logic optimization
- Built multi-player game systems with real-time player interaction and efficient data management architectures
- Delivered client projects with comprehensive documentation and maintainable code following industry best practices

**Game Developer**  
*Freelance*

*Jun 2023 – Present*  
*Remote*

- Developed console-based games in C++ utilizing object-oriented programming principles and advanced game mechanics
- Implemented efficient game loops, collision detection algorithms, and physics simulation for tank movement systems
- Created responsive user input handling systems and real-time gameplay logic for enhanced player experience
- Optimized performance through efficient memory management and algorithm design

## PROJECTS

---

**Palang - E-Commerce Platform**  
*MERN Stack (MongoDB, Express.js, React, Node.js)*

*May 2024 – Aug 2024*

- Developed a full-stack e-commerce web application for furniture retail with user authentication, product catalog, and shopping cart functionality
- Built RESTful APIs using Express.js and Node.js for product management, order processing, and user account operations
- Implemented responsive React frontend with modern UI/UX principles and integrated MongoDB for scalable data storage
- Designed secure payment workflow integration and implemented role-based access control for admin and customer interfaces

**Phishing Email Detection System**  
*Python, Machine Learning, Gemini API*

*Sep 2024 – Nov 2024*

- Developed an intelligent email parser and phishing detection application using Python and machine learning algorithms
- Trained classification model to identify phishing patterns with feature extraction from email headers, content, and metadata
- Integrated Google Gemini API for advanced natural language processing and context-aware threat assessment

**Showcase - Interview Hosting Platform**  
*MERN Stack, Video Integration*

*Jan 2024 – Apr 2024*

- Created a web platform for hosting and displaying professional interviews with content management system capabilities
- Developed dynamic content rendering system using React with server-side data fetching from MongoDB database
- Implemented video embedding, metadata management, and search functionality for interview archive
- Built admin dashboard with CRUD operations for interview management and user analytics

**Library Management System**  
*C++, OOP, Data Structures*

*Oct 2023 – Dec 2023*

- Designed and developed a comprehensive console-based library management system utilizing C++ and object-oriented programming principles
- Implemented features including book catalog management, availability tracking, search functionality, and transaction logging

**Solitaire Game**  
*ASP.NET, C#, Web Development*

*Aug 2023 – Oct 2023*

- Developed a fully-functional web-based Solitaire game using ASP.NET framework and C# backend logic
- Engineered complete game logic including rule validation, card movement mechanics, and interactive user interface
- Implemented session management for game state persistence and designed responsive web interface for optimal gameplay

**Sudoku Solver**  
*Python, Graph Algorithms, DFS*

*May 2023 – Jul 2023*

- Built an advanced Sudoku puzzle solver using Python, leveraging graph-based algorithms and depth-first search techniques
- Optimized backtracking algorithms to efficiently solve complex 9x9 Sudoku puzzles with minimal computational overhead
- Implemented constraint propagation techniques to reduce search space and improve solving performance

---

## SKILLS

**Languages:** C++, C, C#, Python, JavaScript, SQL, TypeScript

**Web Technologies:** MERN Stack (MongoDB, Express.js, React, Node.js), ASP.NET, HTML, CSS

**Frameworks/Libraries:** React, Node.js, Express.js, .NET Framework

**Databases:** MySQL, MongoDB

**APIs & Integration:** RESTful APIs, Google Gemini API

**Tools:** Git/GitHub, Visual Studio, VS Code, Linux/Unix Command Line

**Core Competencies:** Full-Stack Development, Object-Oriented Programming, Data Structures & Algorithms, Machine Learning, Software Design Patterns, Database Design, Web Development, Game Development, Problem Solving

---

## RELEVANT COURSEWORK

Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Theory of Automata, Digital Logic Design, Parallel & Distributed Computing, Computer Vision, Machine Learning, Artificial Intelligence, Information Security, Web Development, Software Engineering
